# Mining, Metallurgical and Chemical Statistics

In the June issue of the *Canadian Statistical Review* the functions and operations of the Census of Industry Division of the Bureau of Statistics were outlined, and it was indicated that subsequent issues would contain detailed reviews of each Section. In accordance with this plan, there follows a description of the Mining, Metallurgical and Chemical Section, the field which it covers, the methods used in the collection of statistics, and the uses made of the resulting data.

This Section is concerned first with the collection and publication of statistics of Canada's mining industry, and secondly, with the collection and publication of statistics of the manufacturing industries which use minerals and mineral products as their chief raw materials. These latter industries are in four groups, namely, Manufactures of Iron and Steel and Their Products; Non-ferrous Metals and Their Products; Non-metallic Mineral Products; and Chemical and Allied Products.

The collection of statistics on mineral production has always been one of the functions of the provincial Departments of Mines; also, up until 1920 the federal Department of Mines collected information on Canadian mining operations. In 1920 the statistical work formerly done by the federal Department of Mines was transferred to the Bureau of Statistics, and co-operative arrangements were made during subsequent years with the Departments of Mines of the various provinces whereby a joint schedule printed by the Bureau is used. The schedule is mailed in triplicate, one copy to be retained by the reporting firm, one for use of the provincial authorities, and one for the Bureau. This method of collecting information avoids duplication of effort by the

reporting companies and leads to similarity in reporting results in federal and provincial publications.

Since the mining industry is conceived as an integral part of industry in general, the schedules cover not only production but employment, salaries and wages, fuel and power used, and other data pertinent to mining operations. They are designed in collaboration with provincial officers, changes being made as new conditions arise.

For statistical purposes of collection and reporting, the mining industry is divided into four broad classes: (a) Metal mining and non-ferrous metallurgical operations, (b) Fuels (coal, oil and natural gas), (c) Non-metal mining or the production of industrial minerals, (d) Clay products and other structural materials.

In view of the importance of coal as a fuel in Canada, a separate annual report on Coal Statistics is issued, including figures of production, imports, exports, and coal made available for consumption. This is supplemented by a monthly coal bulletin, giving similar data by months, and further information on wholesale and retail sales. Similar co-operative arrangements for the collection and compilation of monthly coal statistics have been made with the proper authorities in the coal-producing provinces as we have with regard to the collection of other mining statistics.

In addition to the annual data so collected, monthly figures are obtained and published on the production of Canada's 16 leading metals and minerals or mineral products (gold, silver, copper, nickel, lead, zinc, coal, petroleum, natural gas, asbestos, salt, gypsum, iron ore, lime, cement, and clay products).

Preliminary and Annual reports are published on the Mineral Production of Canada, and in addition a separate report is issued for each mining group, such as gold mining, asbestos mining, silver-lead-zinc mining, etc., as the totals for each industry become available. In all, 24 annual bulletins and 9 monthly bulletins are issued by the mining statistics sub-section.

### *Manufacturing Industries Bases on Mineral Products*

The statistics of the four important manufacturing groups named at the beginning of this review are collected, compiled and published in mimeograph or rotaprint bulletins. The design of the schedules used in the collection of this information is under constant supervision and change in order to keep up-to-date, particularly with regard to the Materials Used and Products Made. Where possible, before changes are made consultation with industry or an industrial association is made.

The Iron and Steel Group is divided into 18 sub-groups or industries, comprising such operations as primary iron and steel manufacture, agricultural implements, automobiles, machinery, railway rolling stock, shipbuilding and repairs, and other products of iron and steel.

The Non-ferrous Metals Group is comprised of such industries as brass and copper products, aluminum products, electrical apparatus and supplies, jewellery and electro-plated ware, and miscellaneous non-ferrous metal products.

The Non-metallic Mineral Products Group consists of the manufacturers of asbestos products, cement products, clay products, coke and gas products, products of petroleum, and other similar products whose principal raw materials find their sources among the non-metallic minerals.

The Chemical and Allied Products industry is rapidly growing in importance in Canada, and during the war the growth was phenomenal. It included the manufacture of heavy or primary chemicals, such as acids, alkalies, and salts; fertilizers; compressed gases; medic-

inal and pharmaceutical preparations; paints; pigments, and lacquers; soaps, washing compounds, etc.; and toilet preparations.

These four groups, therefore, give a well-rounded picture of the manufacturing operations of a chemical and metallurgical nature. In all, during 1947, 67 annual bulletins were issued. In addition to statistics on employment, salaries and wages paid, fuel and power used, details are given of the materials consumed in manufacture and products made. Tables of imports and exports are also included for comparison with the production data and a list of firms covered in each survey is appended.

### *Monthly Data*

Prior to the last war, this section issued monthly information on the production of iron and steel, which is considered a good barometer of industry in general. Figures on automobiles and radio production were also released. During the war the demand for current statistics of strategic materials and products grew rapidly, and the collection to a large extent was the prerogative of the Wartime Prices and Trade Board and the offices of the various Controllers. With the cessation of hostilities, it was considered advisable to continue the collection of information on certain of these commodities, and the statistical work on some of the controls was assumed by the Industrial Census Division of the Bureau to a limited extent, so that in addition to the aforementioned commodities, statistics are available from the section under review, monthly, on refrigerators, batteries, refined petroleum products, wire and wire products, mineral work, washing machines, scrap iron and steel, non-ferrous metal scrap, gypsum products, and paint sales.

Statistics of the products of oil refineries are worthy of special mention. During the war, because of a limited supply of these strategic products, very detailed information was collected and compiled by the Office of the Oil Controller. After the war this work was transferred to the Mining, Metallurgical and Chemical Section and the collection and publication of these statistics have been continued on a monthly basis. For years Canadian oil refiners depended very largely on the import of crude, and during the years immediately after the

war fuel oil was in short supply. Since that time, foreign fields have increased their output, and what was more important, a large pool has been discovered in Alberta, particularly in the Leduc and Redwater areas. Whereas a few years ago the Prairie provinces imported large quantities of gasoline, now with the increase of refining facilities they will be self-sufficient, in all types of petroleum products. Indeed plans are being made to transport the oil by pipe line, to other parts of Canada at least. Domestic production of course reduces the demand for imports and improves the exchange situation.

In addition to the foregoing, and where deemed advisable and necessary, this Division is prepared to make special surveys. As an example, at the present time it is proposed to collect information in January next from Canadian mining companies, asking for their expenditures on both capital and process equipment and supplies. This will have the effect of indicating the importance of the industry to the general economy of the country, and it will show Canadian manufacturers possible markets for their goods. On several previous occasions a special Directory of Chemical Industries was prepared. This is now being brought up-to-date. Other special re-

ports include the sale of pest control products by Canadian registrants, the consumption of chemicals in municipal waterworks and the consumption of refractory materials in metallurgical plants.

### *Uses Made of These Statistics*

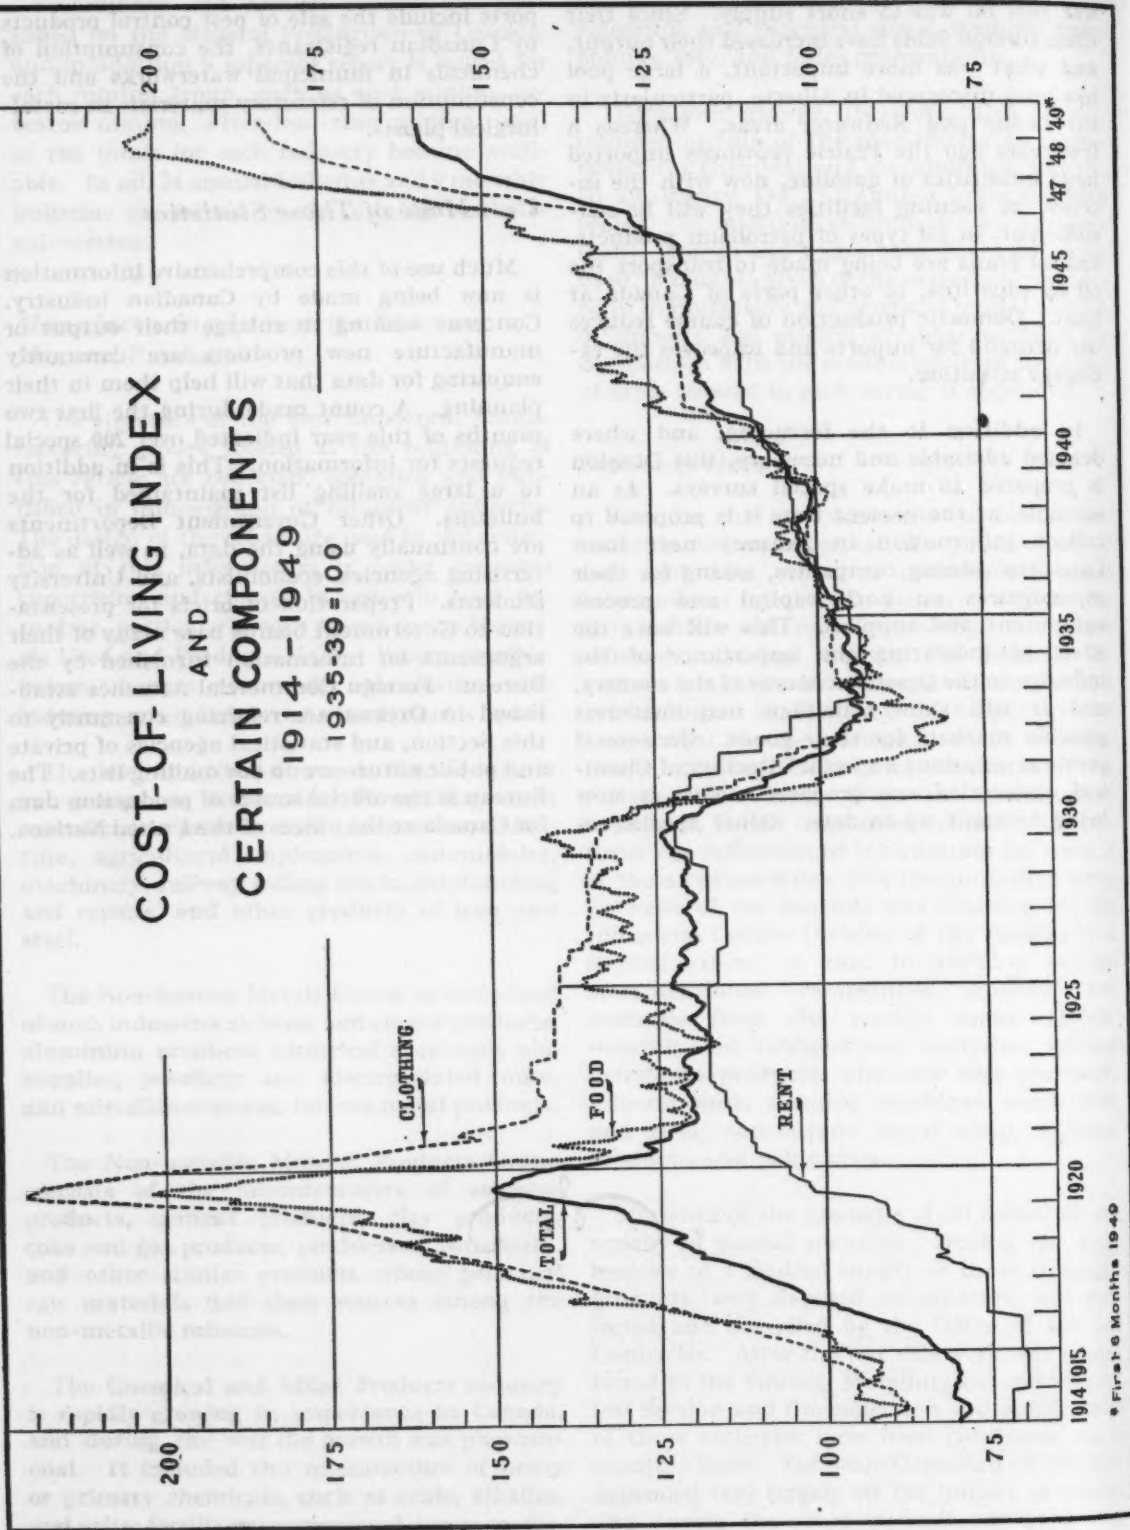

Much use of this comprehensive information is now being made by Canadian industry. Concerns wishing to enlarge their output or manufacture new products are constantly enquiring for data that will help them in their planning. A count made during the first two months of this year indicated over 200 special requests for information. This is in addition to a large mailing list maintained for the bulletins. Other Government Departments are continually using the data, as well as advertising agencies, economists, and University students. Preparation of briefs for presentation to Government boards base many of their arguments on information furnished by the Bureau. Foreign Commercial Attachés established in Ottawa are referring constantly to this Section, and statistical agencies of private and public nature are on our mailing lists. The Bureau is the official source of production data for Canada at the offices of the United Nations.

# **COST-OF-LIVING INDEX AND CERTAIN COMPONENTS**

1914 - 1949

1935-39=100

\* First 6 Months 1949

# Current Economic Conditions

A survey of the currently accepted economic indicators reveals that Canada's economy appears to be maintaining a reasonably steady position with little change, allowing for usual seasonal fluctuations, from month to month or from the same periods of the previous year. The index of production has fluctuated March to July within a range of a single point and currently stands at 185.9 (base 1935-39 = 100). The index of industrial employment stood at 198.3 for July, 1949 compared with 194.5 for June and 198.0 for July of last year. During the last several months no perceptible change in the ratio between factory inventories and shipments has been observed, an indication that goods are moving into hands of the consumers in a steady flow.

As of August 16 Canada's wheat crop was estimated at 391.5 million bushels, only 1.8 million bushels below that harvested last year but about 18.6 million bushels below the ten year (1939-48) average. This year's crop is, however, being reaped from a near record acreage since it is estimated that the 1949 seeded area was 27.5 million acres as compared with one of 24.1 million last year and a ten year acreage of 23.5 million.

The yield on the Prairie provinces where continued early drought and the threat of grasshopper and other damage had threatened, a very short crop will, it is now estimated, amount to 362 million bushels, only about a million below last year. Saskatchewan's wheat production is now placed at 199 million bushels; Alberta's at 96 million and Manitoba's at 67 million. The yields per acre are 21.2 bushels in Manitoba, 12.7 in Alberta and 12.6 in Saskatchewan. Of the 29.5 million bushels produced outside of the Prairie provinces, Ontario is expected to account for 25.2 million with a yield of approximately 30 bushels to the acre.

## Six Months Foreign Trade

Canada imported during the first six months of the current year goods to the value of \$1,409 million and exported domestic products valued at \$1,425 million. Allowing for the re-export of foreign goods to the value of approximately \$13 million there was a half yearly favourable balance of trade of \$29 million. The comparative figures for the first half of the year 1948 were: imports \$1,270 million, exports \$1,400 million, re-exports of foreign goods \$19 million, favourable balance of trade \$149 million and for the year 1947: imports \$1,257 million, exports \$1,328 million, re-exports \$17 million, favourable balance of trade \$88 million.

Thus while the value of both exports and imports has increased materially in the first half of this year over the similar period of the two previous years the increase in the value of imports has radically exceeded that in exports. Canadian prosperity giving rise to an ever increasing demand for goods and improving supplies abroad have both contributed to this phenomenon.

By far the greater portion of the reduced favourable trade balance is caused by a greatly increased importation from the United States and a small rate of increase of exports to that country. During the period under review imports from the United States rose 14 per cent as compared with the similar period of 1948 while exports increased at only about half that rate. The comparative figures for the first six months of the current and the two previous years are: 1949, imports \$1,009 million, exports \$691 million, unfavourable balance of trade (allowing for re-export of foreign goods) \$308 million; 1948, imports \$885 million, exports \$646 million, unfavourable balance of trade

## BOND ISSUES AND RETIREMENTS

\*Par value in million Canadian Dollars

★ \$228 million; 1947, imports \$981 million, exports \$482 million, unfavourable balance of trade \$488 million.

It will be noted that imports from the United States for the first six months of 1948 were \$97 million below those for the similar period in 1947. This was undoubtedly due in very large part to the restrictions which were placed on imports from that country in the fall of 1947 and removed, for the greater part late in 1948 and early in the current year. It appears probable that the high imports for the first six months of this year can be ascribed to buying of those articles which were earlier refused entry into this country. An additional factor was the easier demand for steel in the United States during the spring of this year and the consequent availability of it for exports from that country.

A further factor contributing to the reduction of Canada's balance trade has been a reduction in sales to and an increase in purchase from the United Kingdom. These divergent trends reflect the British effort to achieve parity in her dealings with dollar countries and are likely to continue at least for the remainder of this year.

It should be noted that prior to April 1, 1949, shipments from Newfoundland were considered as imports and sales to her were counted as exports. Subsequent to that date Newfoundland's trade with other portions of the world has been included in Canadian foreign trade totals.

### Alberta Oil Prospects

The proving of the Leduc and Redwater oil fields in Northern Alberta is expected to alter radically the entire economy of the west and to some extent that of all Canada. With these fields having estimated reserves of 300 million barrels in Redwater and 250 million barrels in Leduc nothing but transportation difficulties can prevent them from making Canada self-sufficient in this regard.

The very existence of these rich fields has given great impetus to further exploration in other parts of Alberta. It is estimated that at the present time exploration costs in the province are between \$100 million and \$150 million a year, sums larger than the total amount spent in all the years previous to the discovery

of the Leduc field. Most estimates of Alberta's possible oil reserve place it at approximately a billion barrels with some putting it as high as five billion. The latter figure would put the province among the great oil sources of the world.

The province's approximately 900 wells now have a capacity of about 100,000 barrels a day but have been choked back to 60,000 enough to satisfy the needs of the territory which can now be economically served. It is estimated that with the addition of more wells and the full operation of those now in partial production that 300,000 barrels could be produced daily by the end of the year 1951. Since more than enough oil is now available to meet the demands of present markets the current boom might well be described as an exploratory rather than as a productive one.

The largest operator in the field now has under construction a pipe line from Leduc to Regina where there is at the moment a refinery which will be enlarged as needed. The company also has tentative plans to extend this pipe line farther east and possibly south into the United States oil thirsty northern middle west. The plan offering greatest economies would be to have eastern Canada continue to draw its oil from U.S. and the Caribbean by pipe line and tanker while western United States is served from Alberta. If, however, American tariffs prevent such action there remains the possibility of constructing a pipe line to the head of the Great Lakes and from there transporting oil by tanker to the eastern Canadian consumer points.

Alberta oil seems certain to play a great part in rectifying Canada's dollar shortage since every barrel produced for use in Canada reduces by approximately two dollars Canadian expenditure in the United States and exports, if feasible, would add to our dollar supply.

The province's finances are benefiting directly and immediately from the current oil boom since in the vast majority of cases land was sold to settlers with the mineral rights reserved to the crown. Thus the province enjoys a royalty on all oil produced with the owner of the surface rights to the land below which oil is found being paid flat rentals for acreage used and recompense for any damage suffered from the presence on the farm of the well rigs, pipe lines, etc.

## INDUSTRIAL PRODUCTION AND WHOLESALE PRICES

### *Fluctuations in Price Indexes*

The cost-of-living index advanced from 162.1 to 162.8 between July 2 and August 1. In thus advancing .7 it again reached a new high. As in the May to June and June to July advances a rather sharp rise in the subindex on food prices was the main cause of the upward movement. The food index advanced two points, reflecting the higher cost of eggs and some increase in the price of pork products. The fuel and light index and the index of miscellaneous items were also slightly higher with rent holding unchanged and clothing and home furnishings being very slightly lower.

From August 2, 1948 to August 1, 1949 the cost-of-living index rose 3.4 from 157.5. Rather curiously during approximately the same period the United States Consumers' Price Index, roughly the equivalent of the Canadian Cost-of-Living Index, declined 3.0 per cent from 173.7 to 168.5.

The weekly wholesale price index of industrial materials stood on August 26 at 146.2 and the monthly average of this index was 146.5. The comparative figure for August, 1948 was 162.6. There has, therefore been a decline of the 12 months of 9.9 in this index.

The weekly wholesale index for Canadian farm products for August 26 was 145.6 compared with 150.6 for the week ending July 29th. The monthly average of this weekly index was 146.0 for August, 150.9 for July and 151.2 for August, 1948.

The monthly average of the weekly Investors' Price Index stood at 109.2 for August compared with 104.2 for July and 113.6 for August, 1948. The subindexes for the industrials, utilities and banks all participated in the rise from July to August. The mining stock price index also moved higher during the month of August averaging 89.6 as compared with 84.9 for July and 78.7 for August, 1948.

Reversing the upward movements shown since the beginning of this year, factory shipments of Canadian made motor vehicles in

July decreased 16 per cent from the high level attained in June, but were 68 per cent above July of last year. During the first seven months of this year shipments advanced 15 per cent over those of the same period of 1948.

July shipments of passenger cars totalled 17,324 units compared with 20,008 in the preceding month and 9,509 in July of last year. The seven months cumulative total of shipments was 104,794 compared with 83,688. Commercial vehicle shipments amounted to 8,059 compared with 10,088 in June and 5,597 in July last year. In the seven months 60,704 commercial vehicles were shipped as compared with 60,600 for the same period of 1948.

### *Car Loading Advance*

Revenue freight car loading for the week ending August 27 were sharply higher than for the previous week at 86,183 compared with 79,171 and 84,995 for the equivalent week of 1948. The gain of slightly more than 7,000 cars was in great part attributable to shipments of grain from those sections of the country where early harvesting operations were in progress. This was the first time this year that the total number of cars loaded had exceeded the 80,000 mark.

The cumulative total for the first 34 weeks of the current year was 2,478,521 cars compared with 2,557,550 in the similar period of 1948 and 2,508,947 in 1947. The decline of approximately 49,000 cars loaded was occasioned by a radical drop in the loadings of pulp wood which fell from 195,563 up to the last week in August, 1948 to 132,394 to the same date in 1949. Grain loadings on the other hand are sharply higher during the present year standing at 215,687 cars as compared with a total of 171,095 for the first eight months of the previous year.

Loadings in the western division are running slightly higher than in the two previous years while the eastern division, reflecting the decline in pulp and paper shipments are below the figures reached earlier.

<sup>(1)</sup>As of June 1. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

<sup>(1)</sup>End of period. <sup>(2)</sup>The production of beer is now shown in thousand barrels of 25 gallons each rather than in million gallons. Commencing with April, 1949, Newfoundland is included.

<sup>(3)</sup>Includes bottling of imported liquors.

<sup>(1)</sup> Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

<sup>(2)</sup> Excluding producers' interchange.

<sup>(3)</sup> Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

<sup>(4)</sup> Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(1)</sup> Figures cover the production of firms which normally account for 85 per cent of the total for Canada.<sup>(2)</sup> Since January, 1949, includes concrete chimney blocks. <sup>(3)</sup> Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories.

1948-49 <sup>(b)</sup>	47.9	358.8	406.7			31.4	155.0	186.4		

<sup>(1)</sup>Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

<sup>(2)</sup>Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

<sup>(3)</sup>Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

<sup>(4)</sup>Includes customs exports of Canadian oatmeal and rolled oats.

<sup>(1)</sup> Available for January, April and August only. 1948 and 1949 indexes are subject to revision.<sup>(2)</sup> Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.<sup>(3)</sup> Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.<sup>(4)</sup> Prior to 1941 prices were quoted on a live weight basis.<sup>(5)</sup> Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

\*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

<sup>(1)</sup> Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

<sup>(2)</sup> Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

\*See footnote of page 96.

<sup>(1)</sup> Does not include re-exports.<sup>(2)</sup> This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.<sup>(3)</sup> Other iron and steel has been revised to include iron ore.

Merchandise Exports by Commodities<sup>(1)</sup>

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

<sup>(1)</sup> Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country.

<sup>(1)</sup>The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of \$500,000 or over. <sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. <sup>(3)</sup>For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.
